kokomo 24/7™

BACKGROUND AND CHALLENGES

Illinois State Police needed a quick and efficient health and safety solution for its 3000 employees located in 22 different locations.

In less than five days, our team developed a management system to assist Illinois State police in creating a safer workplace for its first responders. Previous to our health and management system, they were assigning a health administrator to check each employee's health status every Friday and using Excel to document all the data.

OUR SOLUTOINS

As a solution to create a safer workplace for employees of Illinois state police, we provided them with various configured tools and features, such as daily screening, employee logging check-in and out, and an incident management system that allows them to record incident details and provides predictive analysis.

"The system was a game-changer for our agency. It moved us toward real-time location tracking and assessment which allowed us to implement mitigation actions timelier and effectively."
-Dr. Dennis, Andrew - DO FACS FACOS, Illinois State Police (IL)

BENEFITS

- Our highly configurable and intricate role matrix provides the capability to set up security groups for the Illinois State Police user base. It guarantees the protection of sensitive data or personally identifiable information.

- Our incident management system allows Illinois State Police to document incidents in a single platform and save labor and time. First responders can report data anytime from anywhere, and the system immediately notifies administrators. It is the easiest way to share data quickly and build a consistent process.

- Using our daily screening, Illinois State Police can monitor the current health status of the employees. Furthermore, it allows the administrators to identify how many employees are infected, quarantined, or exposed to Covid-19.

- Check-in and out data analysis allow contact tracing to prevent further spread of the Covid-19. Employees, students as well as visiting guests can be monitored using this feature.

- They were able to start using our configured health and safety system for 3000 employees in less than five days. Additionally, our system allows them to manage all 22 offices in different locations through a single platform.

- Our tools and features are cost-effective solutions while delivering the optimal outcome.

- With our single sign-on feature, users are able to have access to all features of our platform without having to log in multiple times.
