

Safeguard government data with Google Workspace

The secure choice for federal, state, and local agencies

Google Workspace for Government provides robust data security and regulatory compliance. The Cyber Safety Review Board (CSRB) recent [findings](#)¹ highlight significant security vulnerabilities in Microsoft's products. Particularly noteworthy is the compromise of email systems belonging to several U.S. government entities and international organizations, impacting more than 500 individuals and 22 organizations. These alarming discoveries emphasize the need for federal agencies to reassess their technology selections.

As a cloud-native service, Workspace was architected for the modern threat landscape in mind. With Workspace, organizations no longer need to patch thick desktop apps, worry about the loss of persistent local files, or keep infrastructure secure and up-to-date, thus, helping IT and security teams to prevent cyber threats before they emerge, enable safer work from any device, and simplify compliance and digital sovereignty efforts.

Workspace offers a more secure, compliant, and cost-effective solution tailored to the needs of government agencies

62%

fewer email security incidents for organizations using Workspace versus Microsoft Exchange ²

2x

more malware on average is detected by Gmail than 3P standard antivirus products alone ³

0

high or critical common vulnerabilities and exposures (CVEs) in Gmail in the last 5 years ⁴

For a limited time, qualifying public sector customers can get special pricing for Workspace Enterprise Plus, Assured Controls Plus, Chrome Enterprise Premium, and training and migration assistance.

City of Dearborn, Michigan

“Keeping our citizens' data safe is paramount to our mission, and we **chose Gmail primarily because of its security**. After replacing a legacy email provider with Gmail, our users noticed a meaningful decrease in spam, phishing, and malware, helping us reduce our cybersecurity risks.”

Mayor Abdullah H. Hammoud
City of Dearborn, Michigan
